# Electric Customer Bills

FEBRUARY 2024

CONSUMER ADVOCATES OF THE PJM STATES' TRANSMISSION HANDBOOK

# INTRODUCTION

The <u>Consumer Advocates of the PJM States (CAPS)</u> commissioned this guide to help consumers, their advocates, and others better understand how transmission is developed and paid for in the PJM region. Read the executive summary in Handbook Volume I to learn more about PJM and CAPS.

Handbook Volume III provides:

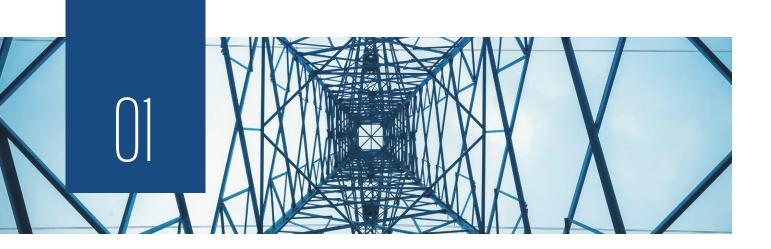

- an overview of the four main charges that make up a consumer's electric bill;
- an explanation of how transmission charges typically appear on bills, along with examples of different variations from utilities in vertically integrated and retail choice states;
- an explanation of why retail customers are charged separately for generation, transmission, and distribution on their utility bills; and
- an exploration of how PJM transmission charges to wholesale customers are passed onto retail customers.

## Retail Customer Electricity Charges

### A. What Charges are Included on a Retail Customer's Electric Bill?

Most residential and commercial customers—also known as "retail customers"—take their electric service from a distribution utility. Their electric bills are generally comprised of four types of charges. Three of those charges account for the largest percentage of an average bill and are related to the infrastructure used to generate and deliver electricity:

- **Generation service**—charges that relate to the costs of generating or purchasing power from the facilities that generate energy;
- **Transmission service**—charges related to the delivery of power over the higher capacity wires and associated infrastructure used to move the energy from the generator to substations located closer to the consumer; and
- **Distribution service**—charges related to the delivery of power over the lower capacity wires and associated infrastructure used to move the energy from the substations to the endpoint where it is consumed.

The fourth category is comprised of additional items that are specific to each utility, such as government taxes and fees, and riders or surcharges for certain utility programs.

### B. How do transmission charges appear on a customer's electric bill?

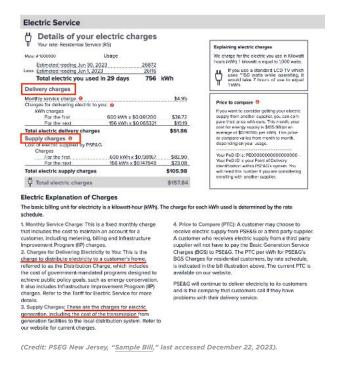

While the specifics of each utility's bills may be different, how transmission charges appear depends on whether the customer is located in a vertically integrated state or a state that offers retail choice, and if the latter, whether the customer takes service from the default utility or from an alternative supplier.

Customers of **vertically integrated** utilities—i.e. a utility that constructs, owns, and operates the generation facilities and the transmission and distribution lines—usually receive bills that list all three major charges together. An example of this type of bill is provided in Figure 1.

Customers of utilities operating in **retail choice** states—i.e. states where the utility provides distribution service and customers are allowed to elect a third-party energy supplier—often have two separate charges on their bills: (1) supply charges, which cover both generation and transmission charges, and (2) delivery/ distribution charges. Examples of such bills are provided in Figures 2 and 3.

Customers in retail electric choice states who **elect an alternative electric supplier** may not see a reference to transmission charges in their bill because the alternative electric supply rate integrates the transmission charges.

RESIDENTIAL RETAIL CUSTOMER BILL: UNBUNDLED ELECTRIC SERVICE (BACK).

## C. Why are retail customers charged separately for generation, transmission, and distribution rather than being assessed a single charge?

The separate charges reflect that: (1) different categories of infrastructure are needed to generate and deliver power, and (2) a range of energy policies and regulations govern each of those categories (see Handbook Volume II for more information on the differences between generation, transmission, and distribution service). The items are separated to provide transparency to customers and to acknowledge that the charges' source— and therefore the entity that controls how much is being charged—may not be the same as the utility assessing the bill.

# 02

# PJM Transmission Charges

### A. How are PJM transmission charges in PJM passed onto retail customers?

As discussed more in Handbook Volumes VI and VII, distribution utilities receive the power sent over transmission lines and resell that power to end use entities that will use that power, i.e. residential and commercial. Because the distribution utilities are the transmission customers—also referred to as wholesale customers—they are assessed transmission charges from PJM, and they then pass those charges down to retail customers. The way transmission charges are passed down depends on the specific electric utility and state laws. In most cases, transmission charges that are passed onto retail customers are laid out in that customer's **distribution utility tariff.** Distribution utility tariffs are posted on the state's utility commission's website and/or the utility's website.

For retail customers that may not choose their own electric provider (vertically integrated states and commercial/industrial customers in certain retail choice states): the distribution tariff will likely include a list of transmission charges, including the current effective Network Integration Transmission Service (NITS) rate for that transmission zone, transmission enhancement charges if not already incorporated into the NITS rate, and additional PJM Transmission charges. Each of these charges is explained more fully in Handbook Volume VI. Retail customer charges will be charged for transmission will either be set charges or volumetric charges based on electricity consumption. An example of this type of tariff filing is provided in Figure 5.

(Credit: Public Service Electric and Gas Company, "<u>Tariff for Electric Service</u>," BPUNJ No. 16 Electric, Twenty-Third Revised Sheet No. 79). For retail customers that have the option to choose their own electric provider but have declined that option: the transmission service charges will be incorporated in the rate schedule for Standard Offer Service (SOS). SOS rates are typically set through an auction process that is managed by the respective PSC/PUC. The SOS rates include transmission service charges based on the FERC-approved NITS rates for the applicable zone (see Handbook Volume VI), any other PJM charges, and any additional costs incurred by the utility in providing transmission service. Figure 6 provides an example of this type of bill.

**For retail customers that have elected an alternative electric supplier:** the alternative supplier's rates will incorporate the transmission charges from PJM. It is important to note that most alternative suppliers provide a black-box rate that does not list a separate transmission charge.

### B. Can a state Utility Commissions change the FERC-approved transmission rate?

The Federal Power Act gives FERC exclusive jurisdiction over the rates for transmission service.<sup>1</sup> Courts have held that because FERC has exclusive jurisdiction, the Supremacy Clause of the U.S. Constitution<sup>2</sup> bars state regulatory agencies from changing FERC-approved transmission rates. In *Nantahala Power & Light Co. v. Thornburg*, 476 U.S. 953, 953 (1986)—the seminal case on this issue—the court addressed FERC's analogous exclusive jurisdiction over wholesale rates and held that:

Once FERC sets such a rate, a State may not conclude in setting retail rates that the FERC-approved wholesale rates are unreasonable. A State must rather give effect to Congress' desire to give FERC plenary authority over interstate wholesale rates, and to ensure that the States do not interfere with this authority.

Although state commissions may not *change* a transmission owner's authorized Annual Transmission Revenue Requirements (see Handbook Volume VI), states commissions may review in distribution rate cases: (1) the mechanism the distribution utility proposes to use to recover transmission charges,<sup>3</sup> and (2) the prudency of the distribution company's request to recover the transmission charges.<sup>4</sup>

<sup>1 16</sup> USC § 824(b).

<sup>2</sup> U.S. Constitution, Article VI, Clause 2.

<sup>3</sup> See, e.g. Kansas City Power v. Mo. Public Serv. Comm., 509 SW 3d 757, request for Mo. Sup Ct review denied (Mo.App. W.D. 2016)(state court upholding a PSC order denying the utility's request to recover certain transmission charges through a fuel adjustment clause and finding that the PSC has discretion to include RTO costs in its decision determining general rates.")

<sup>4</sup> See, e.g., State of Missouri Ex Rel. Kansas City Power v. Mo. Public Serv. Comm., 408 S.W.3d 153, 162-165 (Mo.App. W.D. 2013), request for Mo. Sup Ct review denied, cert. denied (upholding a state PSC order to disallow recovery of transmission costs as imprudent when the costs were for power plants located far from load and the utility had other energy production options in the relevant Missouri rate districts that bore no transmission expense whatsoever. Further noting that "[t]he PSC did not conclude that [approved FERC] transmission service rate was unreasonable; instead, the PSC concluded that it was unreasonable . . . to pass through the otherwise unnecessary transmission costs to ratepayers").

## Advocacy Opportunities

 $\left( \right)$ 

- Rate Cases at the Federal Energy Regulatory Commissions (FERC)—Because the customer bills flow through transmission charges set by FERC, rate cases are the best way to advocate for lower bills.
- Proceedings at state utility commissions—Although state commissions may not change a transmission owner's authorized Annual Transmission Revenue Requirements, as discussed above, they may review:
  (1) the mechanism the distribution utility uses to recover such charges, and (2) and the prudency of the distribution company's request to recover the charges. Advocates can usually raise these issues in distribution rate cases.
- **Informal discussions with utilities**—If a utility is providing misleading information on its bills or is overcharging a customer, advocates often start a discussion with the offending utility. If the issues cannot be resolved informally, advocates should engage with their state commission for a formal resolution.

### **ABOUT CAPS**

Established in 2013, Consumer Advocates of the PJM States, Inc. (CAPS) is a non-profit organization whose members represent over 65 million consumers in the 13 PJM States and the District of Columbia. Regulatory rules vary greatly across jurisdictions, but in each the electricity costs paid by consumers is at least partly determined by the tariff and rules under which PJM operates. PJM and its stakeholders set those rules and CAPS' engagement is necessary to ensure that consumers' voices are heard. CAPS' mission is to actively engage in the PJM stakeholder process and at the Federal Energy Regulatory Commission to ensure that the prices consumers pay for reliable, wholesale electric service are reasonable.

## **ABOUT DGA**

David Gardiner and Associates (DGA) was founded in 2001 to serve as a strategic advisor to organizations and businesses seeking a sustainable future. Our firm combines expertise developing research and analysis with deep understanding of clean energy markets and policy. DGA has worked for foundations, businesses, and non-profit advocacy groups to develop strategies to identify and promote policies that will advance clean energy and a low-carbon economy.

### ACKNOWLEDGMENTS

DGA thanks the PJM Staff, and especially Michael Herman, for helping the report team better understand PJM's processes.
